Provide quality services implementing technical and technological achievements in the transmission system development;
Ensure transparency and non-discrimination for transmission system users in the competitive electricity market;
Promote the company's position internationally through KOSTT’s mission is to:

KOSTT’s vision is to:
Provide secure and reliable services for the transmission system users, socially and environmentally responsible, integrated, integrated in European electricity transmission mechanisms, while also being profitable.

Transmission System Operation
KOSTT is responsible for the processes of planning, analyses, monitoring and control of power flows in the Kosovo Transmission System in a safe, reliable and continuous manner, 24 hours a day/365 days a year. In line with the applicable technical codes, KOSTT ensures continuous, qualitative and safe supply of consumers with electricity, from the transmission aspect. KOSTT also ensures synchronous operation with other Transmission System Operators (TSOs), and provides system operation services.
Power flows in the Kosovo Transmission System are monitored and controlled by KOSTT’s National Dispatch Center.

Kosovo Electricity Market
In line with the License issued by the Energy Regulatory Office, Kosovo electricity market is operated and administered by KOSTT J.S.C.
Foundations for a sustainable competitive electricity market in Kosovo have been set with the Kosovo Electricity Market Design, approved by ERO in March 2013. In this context, Market Rules were prepared and are soon expected to be approved by the ERO.

Participation in the Electricity Market in Kosovo
Any party that wishes to trade in the Electricity Market of Kosovo is required to obtain the License by the Energy Regulator’s Office in Kosovo (ERO) and to sign the Market Rules Accession Agreement with the Market Operator (KOSTT). Currently, (September 2013) there are 17 licensed/registered parties in the Kosovo electricity market.
